## PROFILE OF SKILLS

### *Notable Accomplishments:*

- Worked on large scale applications for multinational organizations
- Designed and developed websites for various small businesses
- Wrote numerous computing-related articles for well-known online publications

### *Computer And Technical Skills:*

- Extensive knowledge of Windows and Linux operating systems and associated command line environments
- Extensive experience designing and developing websites and web applications
- Working knowledge of Android operating system and native development process
- Vast experience building computer workstations; installing various operating systems(native and virtual)
- Comprehensive working knowledge of Adobe Photoshop for web design and image editing.
- Advanced working knowledge of word processing, database & spreadsheet software

### *Programming Languages:*

**HTML5, CSS3, JavaScript, JQuery, PHP, MySQL, Java, C, C#, C++98, C++11, Python**

### *Frameworks and CMS's:*

**JQuery, Angular, .NET, WinForms, MVC, WebAPI, Bootstrap, Umbraco, Wordpress, Genesis**

## EDUCATION

**University Of Windsor, Windsor, ON**

September 2010–December 2015

*BCS[Honours] Computer Science (Minor: Mathematics)*

**Courses:** Data Structures, Advanced Algorithm Analysis, Language Grammars and Compilers, Object Oriented Software Design, Systems Programming, Computer Networks, Mobile Dev. w/ Android, Calculus, Pattern Recognition, Linear Algebra, Numerical Analysis, Number Theory

## **ACHIEVEMENTS AND AWARDS**

- IT Services Scholarship in Computer Science
- University of Windsor In-Course Residence Awards
- Recognition of Achievement Bursary
- J. David McMurray Residence Award
- Director's Honour Roll: January 2012

## **WORK EXPERIENCE**

**Contributing Editor, BenchmarkReviews.com** Oct. 2012–Nov. 2013, March 2016

- In this position, I was required to photograph and edit images of PC components such as CPUs, graphic cards, gaming mice, keyboards and headsets.
- Afterwards, I would write a review that objectively compares the item with competing products as well as express my personal opinions.
- The article would then be uploaded via Joomla or Wordpress after being formatted to match the website's style.

**News Writer, Notebookcheck.net** August 2016–October 2016

- Writing for Notebookcheck required production of at least three, 300 word articles per day. The articles could cover any new developments or upcoming products in the smartphone and general-computing space.

**Freelance Web Developer/Digital Marketing Consultant** December 2015-  
**Lexsoniclabs.com**

- Throughout this period, I frequently engaged with several business owners and entrepreneurs; assessing their needs, developing efficient solutions, and providing technical advice.

**Web Developer/.NET Developer**  
**RankHigher/ Parallel Digital Studios**

April 2018-March 2019

- The initial months of my employment was spent maintaining and developing WordPress sites for various clients; the standard process involved the use of popular frameworks, plugins and custom PHP to achieve the designs set forth.
- The remainder and majority of my tenure was spent working at Parallel (the sister company) on DaveandBusters.com, as one of two primary developers. DnB is a vast site spanning multiple physical servers that receives millions of visits per month; it is built upon the .NET framework and Umbraco CMS and uses Angular.js for particular front end features such as real-time form validation.
- Work was carried out in sprints according to the terms set out in the contract; it generally consisted of delivering new features on a weekly basis corresponding to a new game in store or food/drink special. Building new features required use of .NET MVC library functions (to refresh a section in the page without reloading for example), and Umbraco functions to retrieve data from the CMS and allow store managers to customize/create new widgets via the CMS. We were sometimes required to develop custom plugins for the CMS to allow users to intuitively specify data for widgets on a page where default options would not suffice.
- Occasional maintenance, debugging, performance analysis and reporting was also required. It is not uncommon for one location to experience a unique issue, or for a problem to occur spontaneously. We are therefore responsible to monitor all aspects of the site; databases, server traffic, source control to be able to quickly isolate and remedy an issue when they occur.
- Finally, as a side project for the company I was working with R to perform data analysis on song lyrics and tabular sports data to compile interesting and useful content for online publications and other media entities.
